Quantitative Psychology

Module Code: QP
Credit Value: 15
NQF level: 5
Study duration: 9 weeks

Module description:
The study of psychology is framed within behavioural science and competence in statistical analysis central to the discipline. Statistics are the methods that psychologists use for the objective, systematic description and interpretation of research results. The goal of this module is to teach some of the most commonly used statistical techniques. Students will learn: how statistics support the interrogation of hypothetical constructs; the role that data distributions play in the choice of statistical tests; how statistical power and the choice of correct tests are key to avoiding type 1 and type two errors. Data collection and analysis during this unit will develop key competencies in descriptive statistics (tests use to summarise data) and inferential analysis (tests designed to make inferences about populations and groups).

This module aims to:
- develop students’ capacity to formulate and test research questions and hypotheses;
- develop students’ experience of more complex quantitative research skills;
- develop students’ experience with data collection and management, e.g. SPSS.

Syllabus
- Research design
- Data collection
- Parametric and non-parametric analysis
- Inferential analysis

Learning and teaching methods
The pedagogical approach for this module is informed through the principles of collaborative enquiry and constructionism. Collaborative enquiry is supported through our internet-mediated learning platform the aim of which is to develop a learning community that supports dialogue and collaboration between students through online peer discussion and debate to construct a unique learning experience which will enhance their subject understanding through social interactions which empowers them to explain their understandings, receive feedback from tutors and peers.

Teaching will be delivered through the provision of specified reading materials that will be provided on the UoEO Learning Platform, and will be supported by specified discussion forums, pre-recorded lecturecasts and biweekly online question and answer sessions (using synchronous communication software and application sharing facility). Students will be provided with indicative guidance on, and encouraged to look at relevant websites which are appropriate to the learning outcomes, and to identify and share appropriate web-based resources (as learning support references) with their fellow students. The pre-recorded lecturecasts and the online question and answer sessions will include referenced use of selected case studies which will be drawn from the reading materials and the practice-based and professional/educational contexts and experience of the Tutors. Self-managed learning will supplement lectures and students will be given direction on required and indicative reading.
